

Environmental Policy for Eletta Flow AB

In addition to following the current legislation, Eletta Flow AB will contribute to a better environment by working with the Swedish National Environmental Goals (SNM). This is done by evaluating our environmental aspects against SNM and developing work systems that do not contribute to a degraded environment.

We will focus on these issues:

- To educate and raise awareness of each person's responsibility for working methods and their impact on the environment.
- To promote the reuse and recycling of materials or parts of products.
- To work preventively with measures both internally and externally.
- To maintain the product's long lifetime when reworking the products to counteract the short-lived product trend.

June 2025
